

# AI Interaction Audit Report

- **Student:** Nguyễn Tấn Thắng (23127259)
- **Repository:** thangak18/HW06
- **Branch:** thang/hw06-implementation
- **Audit Policy:** All prompts and AI interactions are recorded verbatim in accordance with the HW06 AI Testing & Audit specifications.

## 1. Audit Policy & Integrity Principles

1. **Independent Verification:** AI is utilized as a generation and acceleration tool. All generated test artifacts are subject to human evaluation, schema validation, and execution verification.
2. **Specification-First Oracles:** Expected test outcomes are strictly grounded in authoritative specification documents (EShop SRS, `api_specification.md`, and assignment guidance), never inferred from SUT implementation flaws.
3. **Traceability:** Every AI interaction is cataloged with exact prompts, tool/model metadata, generation date/time, and transcript references.
4. **Verbatim Prompt Registry:** A consolidated prompt log is maintained in `ai/prompts/AI_PROMPT_LOG.md`.
